

Deimos location Platform Kyros

Laipac and Deimos have reached a collaboration agreement for the development of location solutions with applications in security, protection and people monitoring.

Among this year Laipac and Deimos have been working designing a solution that combines a powerful personal tracking device with a robust and customized platform adapted for nursing care and security safety service providers.

The main achievements of this bracelet – location platform solution, are the successful result obtained before tests on emergency and risky situation with the high-risk professionals like prison guards, bodyguards or undercover security agents. Considering this excellent results accomplished, Deimos has homologate the Laipac 911S location bracelet as one of their security solutions portfolio specialized on alerts monitoring applications.

KYROS is a Deimos` Location Platform designed with the latest software technologies, to provide a robust mobile resource control center and a flexible and scalable operation and administration. **KYROS** is a complete location platform that allows specific management adapted to all tasks related to positioning and security of Mobile resources control. Its architecture provides management and administration features specific to each type of mobile resource, like vehicle, people and objects.

Therefore Kyros is a Mobility solution that increases safety, and improves the security service quality, elevating the efficiency on alarms attention and people monitoring. This location platform provides a very useful tool for the registration of all mobile resources like displaced staff, troops, agents or any person that should be permanently on movement, and allows you to centralize the technical information of each of these elements keeping the track of each action taken.

Deimos considered that the main challenge for all the security and personal tracker application based on location platforms is to ADD valued information to each position in order to increase safety, reduce risks and improve company service; that is why Deimos conceived Kyros as a customized location platform for mobility intelligence.

Nowadays Kyros is a platform integrated into regional and national projects, developing management, safety and communication functions to improve the citizen and environment welfare.
